

Federico Ferrari

On-Chain Investigator · Blockchain Intelligence & Market Analysis

Milan, Italy · federicoferrari3@proton.me · Portfolio: federicoferrari3.github.io

GitHub: github.com/federicoferrari3 · LinkedIn: linkedin.com/in/federico-ferrari-onchain

SUMMARY

On-chain investigator specializing in wallet clustering, cross-chain fund tracing, and market-structure analysis. Independent since 2022, running investigations end-to-end: from raw blockchain data to intelligence-grade reports mapped to FATF red-flag typologies and ICD 203 confidence standards. Builds custom Python / AI-assisted tooling to investigate at speed. Seeking remote-first roles in blockchain intelligence, market surveillance, and on-chain research & risk; available as employee or contractor.

EXPERIENCE

Independent On-Chain Investigator & Analyst · Self-employed

2022–Present

End-to-end on-chain investigations and market-structure analyses: data collection, wallet clustering, cross-chain tracing, and intelligence-grade written reporting, supported by custom Python / AI-assisted tooling and a personal attribution dataset of 2,500+ addresses mapped to 15+ entities. Selected published case studies:

Superfortune (GUA): market-manipulability assessment [full report on portfolio](#)

- Assessed conditional single control of ~94% of the effective circulating supply (proven vesting tranche plus behaviorally clustered wallets, criteria C1–C6); common control assessed as highly probable, not proven.
- Quantified ~\$46.5M of perpetual open interest against a few hundred thousand dollars of real spot liquidity.
- Documented a ~\$2.62M ask wall withdrawn ~91% unfilled, a footprint consistent with order-book spoofing/ layering; intent left unresolved pending order-level data.
- Mapped findings to FATF virtual-asset red-flag typologies with explicit evidence tiers (observed / attributed / assessed), keeping fact and inference distinct.

Eli5DeFi: multi-victim wallet drainer and cross-chain laundering [full report on portfolio](#)

- Reconstructed a BSC → Solana → Tron laundering corridor, de-anonymizing centralized-exchange hot-wallet hops (HTX, KuCoin) via deposit/withdrawal time-and-amount correlation.
- Traced ~\$345k to the actor cluster; recovered obfuscated beneficiaries by decoding 1inch limit-order calldata.
- Surfaced additional victims by re-applying time analysis from the Tron consolidation layer.

Data Science Intern · Università degli Studi di Milano

Apr–Jun 2024

Curricular research internship within SMART BEAR, an EU Horizon 2020 project building a big-data and machine-learning platform for remote health monitoring; applied machine-learning classification models to health data, analysis that became the basis of the BSc thesis.

SKILLS

Investigation & analysis: blockchain forensics · wallet clustering & entity attribution · cross-chain fund tracing · transaction monitoring · market-structure, liquidity & derivatives analysis · behavioral / time analysis

Tools & data: Arkham · DeBank · Cielo · all base explorers (Etherscan, Solscan, BscScan, Tronscan) · Dune / SQL · Python (AI-assisted tooling & automation) · methodology transferable to commercial tracing platforms (Chainalysis, TRM Labs, Elliptic)

Chains: All EVM chains · Solana · Tron · Bitcoin

EDUCATION

BSc in Computer Systems and Networks Security (*Sicurezza dei sistemi e delle reti informatiche*), Università degli Studi di Milano, 2025

Thesis: “Predictive models for continuous monitoring of health data: a SMART BEAR use case”

LANGUAGES

Italian (native) · English (professional working proficiency)
